Summary

Software Engineer passionate about building practical and user-friendly software across mobile and web platforms. Started with Flutter and expanded into React, real-time applications, desktop projects, and AI-assisted solutions. Always curious to learn, improve, and take on new challenges while turning ideas into working products.

Education

Damascus University

Sep 2019 - Sep 2024

Bachelor of Science Informatics Technology

Work

Software engineer

Jun 2025 - Jul 2026

MediCuras | Damascus

Worked on software projects across mobile, web, and desktop platforms. Started with Flutter development and later took on web development and AI-assisted solutions. Worked with the team to build features, fix issues, meet project needs, and support projects through deployment.

- Developed and maintained cross-platform mobile applications using Flutter.
- Integrated REST APIs and real-time features to build responsive and reliable user experiences.
- Worked with designers, backend developers, and QA engineers throughout the development process.
- Took part in feature development, testing, debugging, and performance improvements.
- Contributed to projects involving WPF desktop applications, web development React, and AI-based image processing.

Freelance Flutter Developer

Oct 2023 - Oct 2024

Tazzur Institution | Remote

Developed a custom mobile application for Tazzur Institution as a freelance project, working closely with the client to deliver a solution that connects job seekers with companies and training providers.

- Built a Flutter application that allows companies to post job and training opportunities while enabling users to create CVs and apply directly through the app.
- Implemented Firebase services, including real-time notifications, to keep users updated on new opportunities.
- Added multilingual support to improve accessibility and user experience.

- Worked directly with the client to gather requirements, refine features, and deliver the project based on business needs.

Skills

Programming Languages

Dart Programming Language, Python, C#, HTML, CSS, JavaScript

Software Skills

Flutter, RESTful API, Real Time API, REST APIs, State Management (GetX, BLoC, Provider), SignalR

Web Development

React.js, TypeScript, Vite, Responsive Web Design, HTML5, CSS3

Software Architecture

Clean Architecture, SOLID Principles, MVC

Tools And Platform

Visual Studio, Visual Studio Code, Android Studio, figma, Postman, draw.io, office

Software Skills

Software Development Life Cycle, Requirement Gathering, Problem Solving, OOP(Object Oriented Programming), REST API Integration, Real-time Applications

Version & Communication

Git, GitHub, Jira, Team Collaboration, Time Management

Project

Software Engineer / Flutter Developer

Mar 2022 - Aug 2023

Restaurant Order Management App, Employee and Admin

Developed an application for restaurant employees and admins to streamline order management and operations.

- Dart & Flutter: For building the mobile application.
- Gitx State Management
- Real-time Messaging: Messages are sent and received instantly using Socket.io.
- Flutter, Dart, Socket.io

Software Engineer / Flutter Developer

Oct 2023 - Aug 2024

Employment and Training Opportunities App, Tazzur Institution

Developed an Employment and Training App for Tazzur Institution, where companies can post jobs and training courses, and users can create CVs, apply for opportunities, and request career advice from advisors. The app supports real-time notifications and multiple languages.

- Multi Languages: Create the app with two languages (English & Arabic).
- RESTful APIs: For server-side interactions.

- Get State Management.

Software Engineer / Flutter Developer

May 2024 - Jun 2024

E_Commerce_microservices

This project is an E-Commerce platform built using microservices architecture with Java Spring.

- Product Catalog: Manage and browse product listings.
- User Authentication and Authorization: Secure user login and role-based access.
- Order Management: Place and track orders.
- Payment Processing: Integrate with payment gateways for transactions.
- Microservices Architecture: Decoupled services for better scalability and maintainability.
- RESTful APIs: Well-defined APIs for communication between services.

Software Engineer / Flutter Developer

Jun 2025 - Jan 2026

DentCity Go – Mobile Companion App

Developed a Flutter mobile companion app for a dental desktop system, enabling real-time synchronization between mobile and desktop devices. Integrated SignalR, REST APIs, local network discovery, and AI-assisted dental X-ray analysis to support a connected clinical workflow.

- Built a Flutter mobile application integrated with an existing dental desktop system.
- Implemented real-time bidirectional synchronization between mobile and desktop using SignalR.
- Developed local network discovery to connect the mobile app with available desktop devices.
- Synchronized patient selection, X-ray navigation, and image display states across devices.
- Integrated AI-assisted dental X-ray analysis and visualization.
- Used Cubit for state management and handling real-time application events.

Software Engineer / Flutter Developer

Feb 2026 - Mar 2026

Tripy – Travel Management App

Developed a Flutter travel application connecting travelers, travel companies, trip coordinators, and place owners. Implemented real-time trip tracking with SignalR and Google Maps, role-based workflows, GPS updates, notifications, and Arabic/English localization to support the complete travel experience.

- Built a Flutter travel application supporting multiple user roles and workflows.
- Implemented real-time trip and GPS tracking using SignalR and Google Maps.
- Added live location updates and trip progress events during active trips.
- Implemented trip routes, multiple stops, and stop-reached events.
- Used Cubit to manage application state and business logic.
- Added Arabic and English localization and notifications for trip updates.

Software Engineer / Flutter Developer

May 2026 - Jun 2026

EmoMatch – Real-Time Messaging App – Couple Game

Developed a Flutter-based messaging application with real-time communication, relationship games, and AI-powered features. Implemented SignalR for live messaging and game events, Firebase Cloud Messaging for notifications, and emotion analysis to provide a more interactive communication experience.

- Built real-time messaging with text, image, and voice message support.
- Integrated SignalR for live messages, conversation updates, and game interactions.
- Implemented optimistic UI and message synchronization after reconnecting.
- Added AI-powered features including an AI companion and conversation emotion analysis.
- Integrated Firebase Cloud Messaging for push notifications and background updates.
- Used Cubit to manage application state and business logic.
- Implemented authentication, Google Sign-In, profiles, and connection requests.

Frontend Developer / React Developer

Jun 2026 - Jun 2026

Solar Energy Website

Developed a responsive React website for a solar energy company to showcase its services, projects, and solutions. Built reusable components, interactive sections, animations, and responsive layouts while focusing on a clean user experience and consistent design across devices.

- Built the website using React and reusable components.
- Developed responsive layouts for desktop, tablet, and mobile devices.
- Created interactive sections, animations, and smooth page transitions.
- Focused on clean UI, visual hierarchy, and consistent styling.
- Used Vite for development and project bundling.
- Deployed the production website using Vercel.

Frontend Developer / React Developer

Jun 2026 - Jun 2026

Intelast Website

Developed a responsive React website for Intelast to present its services, solutions, company information, and business capabilities. Built reusable components and interactive sections with a focus on responsive design, clean UI, smooth navigation, and a consistent experience across different devices.

- Developed the website using React and reusable components.
- Built responsive layouts for desktop, tablet, and mobile devices.
- Created interactive sections with smooth transitions and animations.
- Structured company services, solutions, and information into reusable sections.
- Focused on clean UI, spacing, visual hierarchy, and consistent styling.
- Used Vite for development and deployed the website with Vercel.
